Install

STEP 1

Enroll the camera to your router and Alarm.com account:

- a. Plug the camera in. The camera should power on and start flashing red.
- b. After a brief period of time, the camera will start flashing white.
- c. With the camera LED flashing white, open the WiFi settings on your phone and connect to the network labeled ADC-V22 (XX:XX:XX).
- d. Once connected to that network, open an internet browser and type 192.168.1.1 and hit enter.
- e. Press the scan button and select your home WiFi network and enter the WiFi password and press submit.
- f. The camera LED should start flashing green and go to a solid green after a brief delay.
- g. Once the camera has a solid green LED, log on to your Alarm.com account and go to the video tab. Once at the video tab, go to settings at the top of the screen. Under settings you will find an "add video device" button. Select that button and follow the remaining steps to add the camera.

STEP 2

Mount the camera to the desired location with the provided mounting screws. Make sure the camera is installed near a power source.

STEP 3

Power the camera on by plugging the power transformer into the 110V power outlet.

STEP 4

Adjust the view of the camera using your Alarm.com website or app to aim.
